

Engineering Technician

We are seeking an experienced Engineering Technician to support system repair and testing of Submarine Antennas. The candidate will gather data to formulate engineering requirements, analyze proposed solutions and utilize relevant tools and test equipment and perform the testing, troubleshooting and repair support for antenna systems in a lab environment.

The successful candidate will demonstrate qualifications as an engineering technician and a comprehensive understanding of the engineering processes, procedures, scheduling, and technical management associated with testing facility. The successful candidate will demonstrate expertise in supporting the identification and resolution of issues identified during testing as well as possessing the flexibility to support changing requirements to meet fleet readiness schedules. The candidate must be capable of executing defined test plans and procedures utilizing the appropriate tools and test equipment in support of the troubleshooting and repair process. The candidate must demonstrate an understanding of the personnel safety and security requirements associated with working in a lab environment as well as the ability to support modifications to test schedules which may require performance of job duties beyond normal working hours. Candidate must be able to work in a team environment and be able to effectively communicate identified issues with testing impacting system performance.

The ideal candidate will possess:

- High School Graduate or GED and a minimum of 2 year's of related technical work experience is required. A college degree in a related field and/or additional relevant work experience is a plus.
- The position requires strong technical skills and experience. Qualified candidates must have demonstrated ability to effectively communicate and resolve complex issues with customers and staff.
- Good communication skills
- This position requires U.S. Citizenship and either a current Secret security clearance or the ability to obtain a Secret security clearance.

The primary place of performance of the work will be in the Newport, Rhode Island area with occasional travel required within the continental United States.

We offer a competitive compensation commensurate with the technical and professional qualifications, a great benefits package, and an excellent work environment.
